WORK EXPERIENCE:

Intel - Software Developer (JANUARY 2024 - PRESENT)

GitHub Actions, JavaScript, Cypress, Pandas, Python, React, API Testing, Postman, Docker, Kubernetes, Data Visualization, Data Analytics

- Led the entire SDLC of automation telemetry dashboards adopted by **over 40 engineering teams**, measuring **over 8,000 hours of engineering time saved** while partnering cross-functionally to design and deploy reporting solutions.
- Spearheaded the design, development, and deployment of **Intel IT's first Model Context Protocol (MCP) platform** using ToolHive. Enabled AI-powered automation across **15 production workflows spanning 4 teams**, saving **over 1,000 hours of repetitive work**, while partnering with external vendors to adapt open-source solutions for enterprise use.
- Automated determining wafer top-off recipes based on dynamic wafer abort data, **saving 60 hours** of manual engineer effort a week.

Oregon State University - Lab Researcher (OCTOBER 2023 - JUNE 2025)

Python, Unreal Engine 5, Unity, C#, Figma, .NET, Scrum

- **AR prosthesis training app** - Developed an app to convert arm muscle data to corresponding hand movements in Unreal Engine using EMG biosensor data processed by a PyTorch neural network. Predictions were then visualized in an AR environment with a virtual hand.
- **3D HPC visualization Tool** - Created a C# and .NET-based tool integrated with the Structural Simulation Toolkit to visualize High-Performance Computing simulations that enable end users to interactively organize and analyze data collaboratively across VR, desktop, and web solutions.

ZURB - Software Engineer (JUNE 2023 - AUGUST 2023)

Agile Project Management, Ruby on Rails, JavaScript, Selenium Testing, Communication

- Led research and development of ChatGPT AI integration to assist Helio users. AI tools provided customized recommendations to **over 1 million** Helio accounts, **increasing completed user tests by 20%**.

CASS - Software Developer | Mentor (SEPTEMBER 2022 - DECEMBER 2023)

C#, ASP.NET MVC, SQL, SSIS, Figma, Oracle OLE DB, SSMS, React, Tableau, Leadership, Teamwork, Flexibility

- Implemented **automated ETL pipeline program to retrieve statistics** on Oregon State course enrollments using the SQL Server APIs to **study and improve trends in enrollment**. Utilized Tableau to visualize enrollment data in meaningful ways. Data and dashboards were used to **optimize class sizes and scheduling for over 10,000 engineering students**.
- Mentored student developers, collaborated with clients to gather requirements, and helped prioritize future project roadmaps while contributing to software development.

PROJECTS:

OpenAI Chatbot | [GitHub](#)

Python, Microsoft SQL Server, OpenAI

- Built a Retrieval-Augmented Generation (RAG) chatbot using OpenAI GPT models and Microsoft SQL Server. Generated vector embeddings from documents, stored them in a vector database, and retrieved relevant context through semantic similarity search before generating responses.

SPOTAI - AI Powered Spotify Playlists | [GitHub](#)

Python, NumPy, Pandas, Scikit-Learn, Flask, Javascript, Bootstrap, MongoDB, Machine Learning

- Designed and compared K-Means vs. GMM clustering approaches for music recommendation, selecting GMM for its ability to model overlapping genre preferences, integrated with Spotify API to generate personalized playlists.

EDUCATION:

OREGON STATE UNIVERSITY (Corvallis, OR)

- **M.E. Computer Science - GPA 3.75** (Expected December 2026)
- B.S. Computer Science (Data Science), Business Minor - **GPA: 3.5** (2025)
- Clubs: Google Developer Student Club - Technology Officer | Consulting Club - Operations Officer

SKILLS:

Languages: JavaScript, Python, SQL, C, C++, C#, HTML, CSS

Technologies: React, Node.js, MongoDB, Git/GitHub, Bootstrap, Figma, SSIS, SSMS, ASP.NET, Azure DevOps, Jira, Firebase, Tableau, Google Cloud Platform, Unity, Unreal Engine 5
